Overwork vs Attrition by Department

Action Plan — Key Recommendations

● Immediate Actions

Address frequent travel burnout across ALL salary bands — even high salary frequent travelers are leaving, proving travel itself is the root cause not pay

Reduce overwork immediately — overworked employees have highest attrition across all departments especially HR which is already at 29.41%

Prioritize R&D retention urgently — attrition cost is ₹172M, highest in company due to high average salaries. Losing even one R&D employee is extremely expensive.

● Short Term (1-3 months)

Introduce travel policies — rotation, travel limits, or compensation for frequent travelers regardless of salary level

Workload redistribution in HR — smallest department with highest attrition rate, being overworked to breaking point

Salary review for Mid and High band employees who are leaving — not just low salary, higher bands are also showing attrition.

● Ongoing

Monitor R&D department closely every month — company is bleeding most here financially

Track overwork patterns using attendance data — avg hours worked is a leading indicator before attrition happens

Review promotion cycles — just promoted employees show 18.8% attrition suggesting promotions are not retaining people long enough
